University of Minnesota

Self-Help Guide

Grouper: Create and Manage Groups

Grouper provides the University of Minnesota departments an easy way to centrally manage access to different data and applications. This is done through the creation of groups in Grouper that are derived from source systems of record. Grouper supports delegation of permissions in an organized folder hierarchy. In addition to provisioning and deprovisioning Grouper also allows for attestation, auditing and reporting of changes, including point-in-time membership logs.
