Identifying PeopleSoft Attributes within AutoSys
AutoSys Release: 11.3 SP1
Intended Audience: All

The QVIEW tab allows for review of several PeopleSoft attributes, respective to the AutoSys job selected. Select the QVIEW tab and enter the AutoSys Job Name (remember, you can use wildcard searches as well).
The AutoSys command line contains many details with regard to the respective PeopleSoft Run Control - from left to right, the highlighted PeopleSoft Run Control Attributes are:

- Environment
- Run Control ID
- Process Name
- Operator ID

Refer to the Command Syntax document for additional details about the elements of the command line.
Scroll down the 'Job Runs' section to view PeopleSoft Attributes specific to Job Runs. Select the AutoSys Job Run you wish to review, verify 'Standard Output', and then Select 'Go'.

![Job Runs Table]

A 'Standard Output' section will display, directly below the 'Job Runs' section of the QVIEW tab. Using the radio button, select the row you wish to view and then click 'Go'.

![Standard Output Section]
The following is an actual extract of the Standard Output log for an AutoSys Job Run. Note that the following PeopleSoft Attributes have been highlighted:

- Instance
- Process Type
- Process Name
- Run Control ID
- Operator ID
- Process Name
- Process Instance

AutoSys/PeopleSoft Adapter Version 2.1.0 (GA-R15(ODBC 6.0))
AutoSys Adapter Library Version 1.2.13 (GA-P2)
