

Understanding Job Scheduling Dependencies

AutoSys Release: 11.3 SP1

Intended Audience: Business

This job doc is broken into several sections, covering the attributes that impact scheduling – when appropriate the screen captures will include both Job Detail page view and the JIL (Job Information Language view). Note that the 'Job Type' does not display on the QVIEW page. Also, the JIL name (Job Information Language) has an embedded hyperlink which will take you directly to that section of this document.

These job attributes covered in this document include ('Page Name', 'JIL Name'):

- ✓ 'Job Type', ['job_type'](#)
- ✓ 'Date/Time conditions', ['date_conditions'](#)
- ✓ 'Run calendar', ['run_calendar'](#)
- ✓ 'Exclude calendar', ['exclude_calendar'](#)
- ✓ 'Run Days', ['days_of_week'](#)
- ✓ 'Minutes after each hour', ['start_mins'](#)
- ✓ 'Times of day', ['start_times'](#)
- ✓ 'Run Window', ['run_window'](#)
- ✓ 'Condition', ['operator'](#), and ['type'](#)
- ✓ 'Send alarm on failure', ['alarm_if_fail'](#)
- ✓ ['status_code'](#) ('Success', 'Failure', 'Inactive', 'On Ice', 'On Hold', etc.)

Attribute: job_type

Comments or Screen Captures:

The Job Type attribute identifies the type of Job AutoSys should run; and there may be different required fields, depending on the Job Type.

job_type: box

There are two ways to identify a job_type of 'box':

- 1) A Job Box does not contain 'command' line attributes (Job Boxes are used to group and manage Job Streams – they do not execute Jobs by and of themselves).
- 2) A Job box should also be identified by naming convention - the sixth character in the AutoSys job name should reflect 'B' (Box).

Note: 'Send alarm on failure' is not flagged for Job Boxes; the University will only create incidents for Job Failures. If a job within a stream fails, both the Job status and the Job Box status will reflect 'failure'.

Attribute Name	Attribute Value
Primary	
Name	ACPAPBN.Nightly
Description	DX_Su-Fr @19:00
Owner	psoft
Schedule	
Average run time	17355
Date/Time conditions	true
Days	
Run calendar	DX_Su-Fr
Time	
Times of day	19:00
Notification	
Alarms	
Maximum run time (minutes)	0
Send alarm on failure	false

Comments or Screen Captures:

Select the 'Show JIL' button to verify the job type.

The screenshot shows a window titled "Job Details" with a blue header bar. On the right side of the header bar, there are two buttons: "Quick Edit" and "Show Tree". The main content area of the window is a light yellow background with the following text:

```
insert_job: ACPAPBN.Nightly job_type: box
description: "DX_Su-Fr @19:00"
owner: psoft
permission: gx,ge,wx,we
max_run_alarm: 0
alarm_if_fail: n
avg_runtime: 17355
date_conditions: y
start_times: "19:00"
run_calendar: DX_Su-Fr
```

job_type: cmd (command)

There are two types of Jobs which are classified by AutoSys as commands - Job Type 'cmd':

- 1) A Job that contains 'command' line attributes not directly relating to a PeopleSoft ProcessPeopleSoft. These jobs contain a 'C' as the sixth character in the naming convention.

```

job_type: fw (file watcher job)

The University currently uses one other job type - 'fw' (file watcher). A 'File Watcher' job has 'F' as the sixth character in the Job Naming convention; and includes a 'File Watcher' section.

[Back to top](#)

Attribute: date_conditions

Comments or Screen Captures

For a job to run 'standalone', the 'Date/Time conditions' attribute in the 'Schedule' section must reflect 'true'. If the date_conditions field is not set to '1' (true), AutoSys will review ignore any 'Days' or 'Time' attributes and rely solely of dependencies for scheduling.

If the 'Date/Time conditions are 'true', the job or job box will also reference 'Run days', or 'Run calendar' and/or 'Exclude Calendar'; and, 'Times of day' or 'Minutes past hour'. These attributes will be covered in more details in other sections of this document.

This Job Box (ACPAPBN.Nightly) will be selected and displayed on the forecast if the forecast date and time frame is populated on the referenced run calendar. If the 'Date/Time conditions' field were blank, the job would not display on the forecast; nor would it run without manual intervention.

Note: There is a way to identify this Job as a 'Job Box' - a Job Box does not contain 'command' line attributes (Job Boxes are used to group and manage Job Streams – they do not execute Jobs by and of themselves).

[Back to top](#)

Attribute: run_calendar

Comments or Screen Captures

This Job Stream (ACPAPBN.Nightly) is scheduled to use a calendar to determine which days it should run (Run Calendar 'DX_Mo-Fr'). If the current date is populated on the DX_Mo-Fr' calendar; the job will be scheduled to begin at 19:00 (7:00 p.m.).

Note that the 'Date/Time conditions' must be 'true' or the job will not run; regardless of the other attributes provided.

Calendar 'DX_Su-Fr' is fairly self explanatory - it will run Sunday through Friday.

Note: The business does not currently have access to view calendars; a separate document will be created to detail the full calendar functionality.

Attribute: exclude_calendar

Comments or Screen Captures

In addition to specifying a run calendar, job EXPEPPN.UMFEX002 also documents exceptions by specifying an Exclude Calendar ('Holidays') If the current date is populated on the DX_Tu-Sa' calendar, but not on the 'Holidays' calendar; the job will be scheduled to begin at 1:00 a.m.

Note: 'Date/Time conditions' must be true in order for the job to process systematically (the job will not be scheduled to run, if this value is false).

Comments or Screen Captures

A 'run calendar' specifies the days on which a job should run, such as Tuesday through Saturdays, each week. In this example, the 'Processing Days' are highlighted in green. Unless referenced on the exclude calendar, the job will run on any day highlighted (the next screen capture will cover exclude calendar attributes).

An 'exclude calendar' specifies the days on which a job should not run. For example, to help ensure that a job never runs on any University holiday, a calendar named Holidays has been created, and each corporate holiday selected as a processing day.

Attribute: days_of_week

Comments or Screen Captures

The 'days_of_week' or 'Run Days' attribute specifies the exact days a job should be scheduled to run. This attribute cannot be used in combination with a run calendar, (run_calendar).

The following is an example of a Job that is scheduled to run Monday-Saturday, and will run every five minutes on those days.

[Back to top](#)

Attribute: start_mins

Comments or Screen Captures

The 'start_mins' attribute identifies the exact minutes after each hour the specified job should run. 'Minutes after each hour' can not be used in combination with the 'start_times' attribute.

In this example, the job is scheduled to run every five minutes.

Attribute: start_times

Comments or Screen Captures

The 'start_times' attribute identifies the exact time a specified job should run. 'Times of day' can not be used in combination with the 'Minutes after each hour' attribute. Note that these times are recorded in military format (the 24-hour military time format).

In this example, the job is scheduled to run at one o'clock each morning.

Attribute: run_window

Comments or Screen Captures

The 'run_window' attribute identifies the exact time interval a specified job should run. The Run Window attribute is not a starting condition; it acts as an additional control - all starting condition attributes must be met for the specified job to be scheduled.

In this example, the job is scheduled to run at 1, 21, and 41 minutes past the hour between 8:01 a.m. and 5:04 p.m.

The screenshot shows a 'Job Details' window with a table of attributes. The 'Run window' attribute is highlighted in yellow. The table has two columns: 'Attribute Name' and 'Attribute Value'. The 'Run window' attribute has the value '08:01 - 17:04'. Other attributes include Name, Owner, Schedule, Days, Time, Notification, Alarms, Native Security Permissions, and Run Time.

Attribute: operator

Comments or Screen Captures

There are two condition operator's, '&' and '|', 'and' and 'or' respectively.

In the following examples both the referenced jobs must complete (with a status of 'SUCCESS', 'FAILURE', or 'TERMINATED'), in order for this job to be scheduled to run by AutoSys.

Comments or Screen Captures

In this example, the job will be scheduled by AutoSys if 'TREPCH.Sleep_Bremer-PD' completes with a status of 'SUCCESS', 'FAILURE', or 'TERMINATED'

Or

If 'TREPCH.FTP_Bremer-PD' completes with a status of 'FAILURE'.

Attribute: type

Comments or Screen Captures
<p>Type, or status attributes further define conditions. There are several Job Status Dependencies that can be used to control when a job should run; or when a job should not run.</p> <ul style="list-style-type: none">✓ 'd' (done)✓ 'f' (failure)✓ 'n' (notrunning)✓ 's' (success)✓ 't' (terminated) <p>Each of these will be discussed in more detail; followed by some specific examples.</p>
<p>'d' (done) Indicates that the job you are defining may run when the job specified within the condition completes with a status of SUCCESS, FAILURE, or TERMINATED.</p>
<p>'f' (failure) Indicates that the job you are defining may run when the job specified within the condition completes with a status of FAILURE.</p>
<p>'n' (notrunning) Indicates that the job you are defining may run when the job specified within the condition is any value except RUNNING - preventing the dependent job from running at the same time as the job referenced within the condition.</p>
<p>'s' (success) Indicates that the job you are defining may run when the job specified within the condition completes with a status of SUCCESS.</p>
<p>'t' (terminated) Indicates that the job you are defining may run when the job specified within the condition is TERMINATED.</p>

Comments or Screen Captures

'd' (done)

Indicates that the job you are defining may run when the job specified within the condition completes with a status of SUCCESS, FAILURE, or TERMINATED.

[Back to top](#)

Attribute: status_code

Comments or Screen Captures

You can use 'mouse over text' to identify the various job status codes; but we have also included some within this section of the job doc.

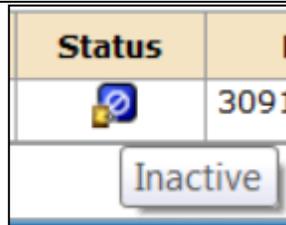

The ACTIVATED status indicates that the top-level box in which the job resides is currently in the RUNNING state. This status is internally controlled and does not have an associated event.

The FAILURE status indicates one of the following:

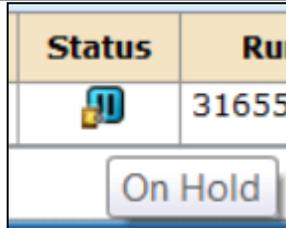

- For a command job, the command exited with a code greater than the maximum success value specified for the job.
- For a box job, the failure conditions for the box evaluated to true.

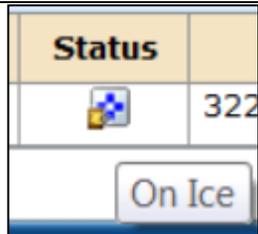

The INACTIVE status indicates that the job is inactive; it has no status, by (or in) itself. For example, a newly created job which has not run is inactive.

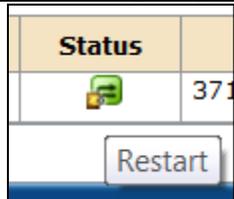

Comments or Screen Captures

The ON_HOLD status indicates that the job is on hold and will not run until it receives the JOB_OFF_HOLD event.

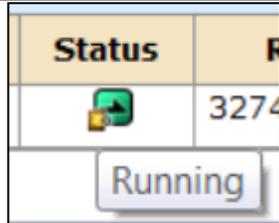

The ON_ICE status indicates that the job is removed from all conditions and logic, but is still defined. Operationally, this is the equivalent of deactivating the job.

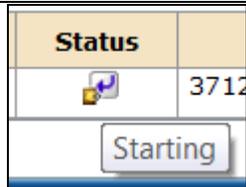

The RESTART status indicates that a job that could not start because of hardware or application problems has been scheduled to restart.

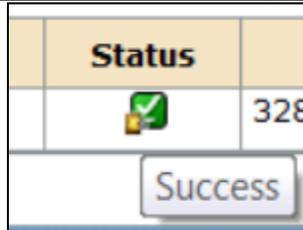

Comments or Screen Captures

The RUNNING status indicates that the job is running. If the job is a box, the RUNNING status indicates that jobs in the box may be started (other conditions permitting). If the job is a command or file watcher job, the RUNNING status indicates that the specified process is running on the client.

The STARTING status indicates that the scheduler has initiated the start procedure with the agent and the job is in the process of “coming up.” This status does not apply to box jobs.

The SUCCESS status indicates that the job exited and is considered successful, as determined by the exit code (for a command job) or the success conditions (for a box job).

Comments or Screen Captures

Status	Run
	22539/1
Terminated	

The TERMINATED status indicates that the job was terminated.
